

Fabeha Rizvi

Frontend Developer (React, React Native)

Delhi, India | fabrizvi786@gmail.com | [linkedin.com/in/fabcodingzest](https://www.linkedin.com/in/fabcodingzest) | github.com/fabcodingzest

SUMMARY

Frontend developer with 3+ years of experience, starting in React web and moving into React Native. As frontend lead on Boraami's founding team, set up its mobile app from the first commit, led a team of 4 developers, built its React admin dashboard, and took the app from beta to public launch on both stores, where it has 2,000+ downloads, 1,700+ users, and 99.7% crash-free users. Before that, built React web apps for a healthcare platform.

SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML, CSS

Frontend: React, React Hooks (incl. custom hooks), Redux Toolkit, RTK Query, Vite, Tailwind CSS, shadcn/ui, Material UI, Responsive Design

Mobile: React Native, Expo, Expo Router (React Navigation), Tamagui, EAS Build, iOS & Android, App Store / Google Play Deployment, Push Notifications (Expo Push, Firebase Cloud Messaging, APNs)

Backend (working knowledge): Node.js, Express, MongoDB, REST APIs, Socket.IO

Tools: Git, GitHub, Sentry, Amplitude, Cloudflare Workers

Practices: Performance Optimization, Debugging, State Management, Code Reviews, Agile

EXPERIENCE

Boraami LLC | [boraami.app](#) | Remote, international team

Frontend Lead (React Native) | Jan 2024 – Present

Community-driven social media app, live on the App Store and Google Play. Part of the founding team since Nov 2022 (product concept, design direction, team coordination).

Leadership & Delivery

- Set up the app from the first commit and took it from a 50+ tester beta to public launch on both stores, handling EAS builds, releases, and store reviews; it has reached **2,000+ downloads**, **1,700+ registered users**, and ~350 monthly active users.
- Led a team of 4 frontend developers to build a Tamagui design system of **23+ reusable components** on shared design tokens, giving consistent screens and light/dark themes; reviewed code and guided junior developers.
- Worked with designers and project managers across time zones and contributed to product decisions.

Mobile App (React Native)

- Raised crash-free users from about 95% in the first month to **99.7%** (Sentry): fixed Android out-of-memory crashes by virtualizing the GIF picker and serving smaller feed images, and a Session Replay ANR by upgrading the Sentry SDK.
- Made likes and reposts feel instant with optimistic updates that roll back on failure (RTK Query), and built threaded replies, quote posts, and mentions with autocomplete.
- Built in-app and push notifications: real-time updates over Socket.IO, with REST reconciliation on reconnect and a periodic refetch so missed events can't leave the unread count wrong; push notifications via Expo Push (FCM/APNs) and notification grouping.

Admin Dashboard & Trust and Safety (React)

- Built the React admin dashboard (TypeScript, Vite, shadcn/ui, Tailwind CSS), live from launch, that moderators use to review applicants, reports, and users; httpOnly-cookie login, deployed on Cloudflare Workers.
- Built the trust and safety features app stores require for user-generated content (blocking, reporting, profanity filter), plus age gating (13+), suspensions, and role-based access.

Backend Contributions

- Took over the existing Node.js/Express backend and extended it: added and updated API endpoints and MongoDB models for features such as auth, notifications, blocking, and account deletion.
- Built an admission quiz that keeps membership limited to genuine fans: it auto-approves or auto-rejects clear cases and sends borderline scores to moderators, with email notifications; it has processed **2,400+ membership applications** (2,000+ approved).

Frontend Developer (Contract) | Wayfareoworld Advent Pvt Ltd | Dec 2021 – May 2022 | Delhi, India

- Built responsive web apps for a healthcare platform: patient portal, appointment booking, and payment workflows integrated with third-party APIs.
- Managed state with Redux and integrated REST APIs in an agile team with design and backend developers. **Tech:** React.js, Redux, Material UI, REST APIs, Git.

EDUCATION

Bachelor of Computer Applications | Indira Gandhi National Open University | Jan 2018 – Jun 2021

PROJECTS

TradeByte (github.com/fabcodingzest/TradeByte): Second-highest contributor in the GirlScript Uplift open-source program (team of 6); built Google OAuth, user profiles, dashboards, email notifications, and Razorpay payments. Node.js, Express, MongoDB, Tailwind CSS.

React Movie Library (github.com/fabcodingzest/React-Movie-Library): Movie discovery app with search, categories, and recommendations using the TMDb API; state managed with Context API and useReducer; styled with Tailwind CSS.
